Amahi

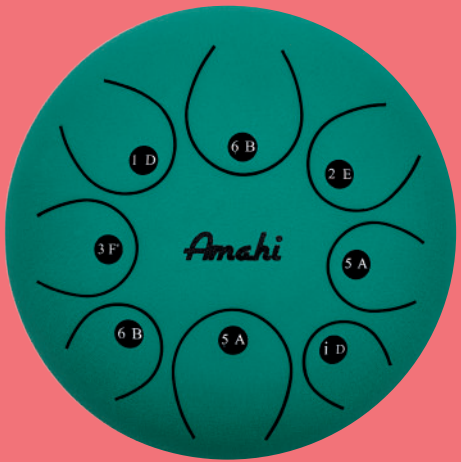
Amahi

Getting started:

Out of the box, your Amahi steel tongue drum is ready to play, no experience needed!

The 10" steel tongue drum is tuned to an 8 note D major pentatonic scale. You can create your own compositions or learn some of the simple tunes included here.

The drum can be played on a table, the floor, or even your lap. The tongues can be struck with the hands or mallets. We recommend using a light to medium touch when playing with the mallets.



Care and maintenance

Our steel tongue drums are made from high carbon steel and are extremely durable when handled properly. We recommend keeping your drum at a comfortable temperature, avoiding extreme hot or cold temperatures. The surface of the drum can be cleaned with a soft, non-abrasive cloth.

Amahi steel tongue drums use strong magnets on the inside of the drum to refine the pitch. With extended or boisterous use, the magnets can sometimes become loose or move and create a metallic rattle when played. Simply uncap the bottom opening of your drum and move the magnets in place with the end of your mallet.

Happy music making!
